

BLINKIT

Sales Analytics Dashboard

Power BI | Excel | Data Analytics

Hariom Dubey

St. Andrews Institute of Technology and Management

Project Overview

OBJECTIVE

Analyze Blinkit sales data to identify:

- 1 Sales Performance**
Track total and average revenue trends
- 2 Customer Purchasing Trends**
Understand what and how customers buy
- 3 Outlet Performance**
Compare outlets by size, type, and location
- 4 Product Category Analysis**
Identify top and low performing categories
- 5 Business Insights**
Convert raw data into decisions

TOOLS USED

- Microsoft Excel**
Data organization & preliminary analysis
- Power BI**
Interactive dashboard & visualization
- Power Query**
Data extraction, cleaning & transformation
- DAX**
Custom measures & calculated metrics

Dataset Information

Kaggle / Blinkit Public Dataset

DATASET SOURCE

8,500+

NUMBER OF RECORDS

12

NUMBER OF COLUMNS

DATA CLEANING STEPS

Removed duplicate records

Handled missing values

Corrected data types

Standardized category names

Dashboard KPIs

Core business metrics surfaced at the top of the report

Total Sales

Sum of overall revenue generated across all outlets and product categories.

Average Sales

Mean sales value per item, indicating typical transaction performance.

Number of Items Sold

Total count of unique products sold, reflecting overall demand volume.

Average Rating

Mean customer rating across items, signalling product & service quality.

Dashboard Overview

Visualizations Used

Visualization	Purpose
KPI Cards	Business Metrics
Donut Chart	Fat Content Distribution
Bar Chart	Item Type Sales
Line Chart	Outlet Establishment Trend
Pie Chart	Outlet Size Contribution
Funnel / Column Chart	Outlet Location Analysis
Slicers	Interactive Filtering

7

Distinct visual types combined
into one interactive report

*Every chart is linked to the slicer panel
for real-time cross-filtering.*

Key Insights

Medium-sized outlets contributed the highest share of total sales \$507.90k, making them the best-performing outlet size.

Fruits & Vegetables and Snack Foods generated the highest revenue, indicating strong customer demand.

Tier-3 outlets accounted for the highest share of total sales \$207.37k, outperforming Tier-1 and Tier-2 locations.

Regular Fat products contributed approximately XX% of total sales, reflecting higher customer preference compared to Low Fat products.

Older outlets show more consistent revenue.

Business Recommendations

01

Increase stock of top-selling categories.

02

Improve inventory planning.

03

Expand medium-sized outlets.

04

Launch offers for low-performing categories.

05

Improve customer ratings through better service.

Challenges & Learning

CHALLENGES

- Missing values
- Data cleaning
- DAX calculations
- Dashboard layout

LEARNING

- Power Query
- DAX Measures
- Data Modeling
- Interactive Dashboard Design
- Business Insight Generation

Conclusion

Project Outcome

- ✓ Built an interactive Power BI dashboard.
- ✓ Reduced manual reporting by creating one interactive dashboard.
- ✓ Improved understanding of sales analytics and data visualization.
- ✓ Demonstrated the ability to transform raw data into business decisions.
